Ran 32 of 81 checks

Findings - 15 need attention

FAILED HIGH Product pages discoverable without JavaScript

Make product pages discoverable without JavaScript

WHAT WE FOUND

Counted product pages discovered by the non-JavaScript crawl. None were found — JS-only storefront, products missing from sitemap, or the crawl was blocked.

How we checked: Count the product pages a non-JavaScript crawl could discover via the sitemap or initial HTML (no JS execution). The fetcher already attempted discovery; we read ctx.pdpSample.

- No product pages discoverable from a non-JavaScript crawl

Checked: fixjeiphone.nl/sitemap.xml, fixjeiphone.nl

FAILED HIGH Products are machine-discoverable

Publish a product feed or a crawlable product sitemap

WHAT WE FOUND

Ran the discovery cascade (feed -> platform catalog -> typed sitemap -> content-verified crawl). Method: `none`; verified 0 product pages.

How we checked: Read the product-discovery cascade result from ctx.discovery. Score by discovery method (feed / platform_api / sitemap_typed -> pass when verifiedProductCount >= MIN_CONFIDENT_PRODUCTS; content_verified -> partial; none or under-threshold -> fail).

- No reliable way for agents to discover your products

Checked: fixjeiphone.nl

FAILED HIGH Terms of service page reachable

Publish a terms of service page and link it from your site nav/footer

WHAT WE FOUND

Probed 5 candidate ToS paths (nav-discovered + platform-conventional) and none returned a 2xx body.

How we checked: Discover candidate URLs by scoring homepage nav/footer anchors for terms/tos/legal/conditions keywords, then append platform-conventional paths; probe each with politeFetch and pass on the first 2xx with >=200 stripped-body chars.

- No terms-of-service page reachable at any candidate URL

Checked: `fixjeiphone.nl/terms`, `fixjeiphone.nl/terms-conditions`, `fixjeiphone.nl/terms-of-service`, `fixjeiphone.nl/policies/terms-of-service`

FAILED HIGH /.well-known/ucp profile is present with a `version` field

Publish `/.well-known/ucp`` with at minimum a ``version`` field

WHAT WE FOUND

Inspected `/.well-known/ucp`` for a parseable JSON document with a top-level ``version`` string.

How we checked: Confirm `ctx.wellKnownUcp`` is non-null and carries a non-empty ``version`` string (the only universally-required UCP profile field).

- `/.well-known/ucp`` is not reachable or not parseable as JSON

Checked: `fixjeiphone.nl/.well-known/ucp``

FAILED HIGH UCP profile carries all four required top-level keys

Add every required top-level key to the UCP profile

WHAT WE FOUND

Wanted to inspect UCP root keys, but no profile was found.

How we checked: Read the profile root (or top-level ``ucp`` wrapper) and verify the presence of ``version``, ``services``, ``capabilities``, and ``signing_keys`` keys.

- No `/.well-known/ucp`` profile present

Checked: `fixjeiphone.nl/.well-known/ucp``

FAILED HIGH UCP profile declares a valid shopping service entry

Declare a shopping service entry with a recognised transport and an HTTPS endpoint

WHAT WE FOUND

Wanted to walk the UCP profile's ``services[]`` for a valid shopping entry, but no profile was found.

How we checked: List every `services[]`` entry whose namespace is ``shopping`` (or contains ``shopping``) and require at least one with ``transport`` `{rest,mcp,a2a,embedded}` AND a syntactically valid ``https://`` endpoint.

- No `/.well-known/ucp`` profile present

Checked: `fixjeiphone.nl/.well-known/ucp``

FAILED HIGH Every signing_keys[] entry is a valid JWK

Make every `signing_keys[]`` entry a JWK with `kyt`` + `kyt`-specific`` params

WHAT WE FOUND

Wanted to validate `signing_keys[]``, but no UCP profile was found.

How we checked: Walk `signing_keys[]`` and validate each entry per §4.1 (kyt` required) + §6 (kyt`-specific required parameters). ``kid`` is OPTIONAL per §4.5 and not enforced here.

- No `/.well-known/ucp`` profile present

Checked: `fixjeiphone.nl/.well-known/ucp``

NOT APPLICABLE **LOW** **Sitemap respects 50 MiB / 50,000-URL caps per document**

Split over-cap sitemaps into a sitemap index

WHAT WE FOUND

Wanted to verify each sitemap's byte size and entry count against sitemaps.org caps, but the runner did not surface any sitemap resources.

How we checked: Check raw byte size ($\leq 52,428,800$ B) and entry count ($\leq 50,000$) for every resolved sitemap resource.

- Transport metadata not available — runner update pending

Checked: `fixjeiphone.nl/sitemap.xml`

NOT APPLICABLE **LOW** **Sitemap is served as UTF-8**

Serve every sitemap document as UTF-8

WHAT WE FOUND

Wanted to check the encoding of every resolved sitemap document, but the runner did not surface any sitemap resources with transport metadata.

How we checked: Inspect every resolved sitemap document's raw byte stream for UTF-8 decodability (sitemaps.org encoding requirement).

- Transport metadata not available — runner update pending

Checked: `fixjeiphone.nl/sitemap.xml`

NOT APPLICABLE **LOW** **UCP MCP-transport entries have valid HTTPS endpoints**

Make every declared MCP transport endpoint an absolute HTTPS URL

WHAT WE FOUND

No UCP profile found; MCP transport validity is not evaluable.

How we checked: Filter services[] to entries where transport=mcp and validate that `endpoint` is an absolute https:// URL.

Checked: `fixjeiphone.nl/.well-known/ucp`

NOT APPLICABLE **INFO** **llms.txt present (informational)**

Publish an /llms.txt manifest (optional)

WHAT WE FOUND

Looked for /llms.txt at the site root; the fetcher returned no file.

How we checked: Check whether the fetcher reached an /llms.txt at the site root. Informational only — no failure path per llmstxt.org being a voluntary community convention.

Checked: `fixjeiphone.nl/llms.txt`
